

2022 Fire Sprinkler Competition

FACT SHEET

Project Manager:

David Victor, VSC Fire and Security

For questions related specifically to the fire sprinkler competition, contact David Victor at dbvictor@vsfs.com. For all event questions, contact Jarrell Jackson, National Craft Championships Director, (202) 595-1789 or jackson@abc.org.

Specific Competition Eligibility

The fire sprinkler competition has no competition-specific eligibility requirements. Please refer to overall eligibility requirements of the guidebook.

Online Exam

Important news for 2022 - The online exam must be completed before competitors arrive on site. Exceptions will be made for extreme circumstances with prior approval of the NCC Director via email. If an exception is granted, the makeup exam will take place Tuesday, March 15, 8:30-11 a.m., and be proctored on site by NCCER. Only those competitors with prior approval from the NCC Director will be allowed to take the test on site. All competitors must sit for the online exam or face disqualification from the NCC. The online exam continues to make up 25% of one's overall competition score.

Competitors will complete the online exam at a local NCCER Accredited Training Sponsor or Assessment Center. It is the responsibility of the sponsor organization to schedule test sessions directly with NCCER by emailing a request to: NCCTest@nccer.org, with the subject line Schedule NCC Test.

NCCER will contact the sponsoring organization to provide access to the online test in NCCER's Testing System. Information on accessing the testing system will be provided, including requirements for the testing proctor.

All exams/tests are based on the standardized craft training process. In addition to the knowledge and skills required for each competition, all competitors should have completed the NCCER Contren® Core Curriculum modules. A nonprogrammable calculator is permissible for the online exam, but no reference materials are permitted.

Practical Performance Test Description

The practical portion of the fire sprinkler competition will consist of installing a 2 ½ " butterfly valve, a 2 ½ " alarm check valve and 3 sprinkler heads. The three sprinkler heads shall consist of an upright, a pendent and a sidewall. This will all be piped from 2 ½ " schedule 10 pipe. The competitor will be given drawings with various views of the riser and sprinklers as well as the manufacture data sheet showing the arrangement of the valve trim. A loose assortment of steel pipe and cast-iron fittings will be given to the competitors to complete the task. After the riser assembly and sprinklers are complete, they will be connected to a water source and checked for leaks. When the project is **leak free**, the judges will ask a series of questions regarding the operation of the valve and its trim.

Each question session will take place in the order the competitors complete their project. No competitor will be allowed to leave the competition area until the question session by the judges is complete. When the horn blows at 3 PM all work shall stop. If there are competitors that have **leak free** projects, but have not been questioned by the judges, all remaining competitors will remain in the competition area until all of the competitors that have **leak free** projects have been questioned by the judges. At 4 PM all competitors shall return to the competition area to completely breakdown and clean the competition area.

Knowledge and Skills Required

The knowledge and skills for this competition are based on all levels of the NCCER Contren® Learning Series sprinkler fitting curriculum. It is strongly recommended that competitors have a working knowledge equivalent to a third-year apprentice. It is also recommended that each competitor works with his/her employer and/or instructor on the assembly of alarm valve trim. The competitor will be judged on all aspects of installation with a strong emphasis on safety and procedure.

Tools Required

Each competitor should bring only the tools listed below to the competition. Tools may be examined prior to the practical performance test and additional tools will be stored until the competition has concluded. If a tool, necessary to complete the practical performance test, is not listed, the National Craft Championships Committee will provide it:

- 10-inch crescent wrench
- One 8 or 10-inch pipe wrench
- One 12 or 18-inch pipe wrench
- Torpedo level
- File – to clean pipe ends
- 420's Channel lock pliers
- 25' Tape measure
- Socket set with deep set sockets and ratchet.
- 10-inch channel locks
- Hacksaw w/new blade

Sample Score Sheet

The following sample score sheet is provided to give competitors an *example* of the criteria that may be included in the practical performance test. **However, this score sheet is not intended to act as a study guide in preparation or to imply specific criteria that will be judged during the actual practical performance test.**

**ABC National Craft Championships
Fire Sprinkler Sample Score Sheet**

Judging Criteria	Competitor Identification Numbers					
	Maximum					
Plan preparation						
Fabrication procedure						
Material organization						
Proper pipe location						
Proper sprinkler location						
Proper hangers						
Appearance						
Leaks						
Sequence of work						
Care and use of tools						
General – ability to follow directions, quality of workmanship, neatness, best use of time and completion						
Project disassembly						
SUBTOTAL:	160					
Safety – housekeeping						
Use of hard hat						
Use of safety glasses						
Use of power tools						
Proper footwear						
SUBTOTAL:	40					
GRAND TOTAL:	200					
Tie Breaker #1						
Tie Breaker #2						
Tie Breaker #3						
Tie Breaker #4
