

2022

NATIONAL
CRAFT
CHAMPIONSHIPS

PRESENTED BY

2022 Plumbing Competition

FACT SHEET

Project Manager Jan Prakke

For questions related specifically to the plumbing competition, contact Jan Prakke at janprakke@gmail.com. For all event questions, contact Jarrell Jackson, National Craft Championships Director, (202) 595-1789 or jackson@abc.org.

Specific Competition Eligibility

The plumbing competition has no competition-specific eligibility requirements. Please refer to overall eligibility requirements listed on page 3 of the guidebook.

Written Exam

Important news for 2022 - The online exam must be completed before competitors arrive on site. Exceptions will be made for extreme circumstances with prior approval of the NCC Director via email. If an exception is granted, the makeup exam will take place Tuesday, March 15, 8:30-11 a.m., and be proctored on site by NCCER. Only those competitors with prior approval from the NCC Director will be allowed to take the test on site. All competitors must sit for the online exam or face disqualification from the NCC. The online exam continues to make up 25% of one's overall competition score.

Competitors will complete the online exam at a local NCCER Accredited Training Sponsor or Assessment Center. It is the responsibility of the sponsor organization to schedule test sessions directly with NCCER by emailing a request to: NCCTest@nccer.org, with the subject line Schedule NCC Test.

NCCER will contact the sponsoring organization to provide access to the online test in NCCER's Testing System. Information on accessing the testing system will be provided, including requirements for the testing proctor.

All exams/tests are based on the standardized craft training process. In addition to the knowledge and skills required for each competition, all competitors should have completed the NCCER Core Curriculum modules. A nonprogrammable calculator is permissible as part of the online exam, but no reference materials are permitted.

Practical Performance Test Description

Each competitor will be assembling plumbing piping systems using copper, cast iron, steel pipe, PVC and CPVC. These systems may incorporate more than one joining method for each system. Plumbing drawings will be provided along with fixture cut sheet with rough-in dimensions. The competitor will use the drawings to perform the tasks of assembling the plumbing piping systems with code knowledge and instructions. Systems will be tested to ensure they do not leak.

This exercise will test the ability to read simple plumbing diagrams, install rough plumbing according to the diagrams, and specifications, and cut and prepare for connection of various plumbing piping materials. The order, of the below tasks, will depend on the availability of some equipment.

Task # 1

1. Read all plumbing drawings associated with this job and understand them.
 2. Install rough plumbing, both waste and water as per drawing provided and rough-in sheet. Install as shown on the simple drawing provided.
 3. Show location of backing for the lavatory on the wall section provided.
 4. Run the Pex Piping and join
-

5. Solder / braze the copper and assemble the NHCI & PVC fitting.
6. Copper water piping will be tested with air pressure.
7. Install brackets provided to secure water and W&V piping.

Task # 2

1. Determine the length of pipe needed for the 45-degree offset. Then cut, ream & thread the steel pipe nipple for this offset.

Task # 3

1. Cut 3" steel pipe and roll groove both ends per requirements to make the correct joining method.
2. Take prepared groove pipe and assemble with the 90-ell provided.

Task # 4

TBD

Notes:

- Safety First - Always wear your PPE.
- Set all rough-ins to the provided rough – in sheets.
- You have six hours to complete these tasks.

General plumbing notes:

- Install all fixture rough-ins according to submittal/specifications diagrams.
- Locate backing boards on wall section where required.
- Handicap accessibility is **not** applicable.
- Cast iron no-hub waste will be assembled per manufacture requirements.
- Copper tubing lines to be soldered/brazed water tight, and will be tested. (Don't forget to cap.)
- All plumbing work to have a neat appearance, and work area to be kept safe and clean.

Materials Provided

- PVC
- Cast iron Copper PEX pipe CPVC
- Galvanized steel pipe

Knowledge and Skills Required

The knowledge and skills for this competition are based on all levels of the NCCER Plumbing curriculum. It is strongly recommended that competitors have a working knowledge equivalent to a third-year apprentice.

Tools Required

Each competitor should bring only the tools listed below and on the following page to the competition. Tools may be examined prior to the practical performance test and additional tools will be stored until the competition has concluded. If a tool, necessary to complete the practical performance test, is not listed, the National Craft Championships Committee will provide it:

- Hammer
- Tubing cutters (1-inch copper through)
- Screwdrivers (flat and Phillips)
- Channel-lock pliers
- Torpedo level
- Tape measure
- Pencils
- PVC/CPVC cutters
- Phillips bit and holder for screw gun
- No-hub torque wrench
- 8- and 10-inch adjustable crescent wrenches
- Striker
- Non-programmable calculator
- Side shields for prescription eyewear or appropriate over-glasses protection
- Knee pads

Tools Provided by NCC

- Torch Rig Drill
- Wall framing
- Pipe threading machine Stand vise
- Saw
- Pex Gun
- Grooving Machine

NOTE: Remove all burrs on the end of piping where press fittings or push on fittings are used to keep from damaging o-ring and failing pressure test.

Sample Score Sheet

The following sample score sheet is provided to give competitors an example of the criteria that may be included in the practical performance test. However, **this score sheet is only a sample and not intended to act as a study guide in preparation or to imply specific criteria that will be judged during the actual practical performance test.**
